

E-Waste Recycle Program for Hospitals

GREEN MONSTER e-cycling has quickly become one of the premier computer and electronics recycling companies in the Connecticut and surrounding states. Centrally located in West Hartford, Connecticut we offer the greenest way to recycle your retired computer equipment and peripherals and all other electronic equipment. E-cycling makes recycling right for homes, businesses, schools, buildings, hospitals, and government agencies. Our long-term commitment to the environment and our logistical and technical expertise mean we can satisfy all of your e-waste needs.

You can count on us for:

Data security - We wipe or destroy all hard drives, protecting you from identity theft and ensuring your data is destroyed.

Environmentally friendly - We have a comprehensive **ZERO LANDFILL** policy. We make sure that 100% of the material we receive is recycled in an environmentally friendly manner.

Compliance with the law - We are in compliance with all federal regulations regarding proper disposal of toxic/hazardous e-waste, and we will provide certificates of destruction or donation upon request.

Convenience - We will pick up your material at your convenience, minimizing disruption to your work flow.

Your hospital may have recyclable materials specific to your facility. Each hospital should closely examine all the materials that are being generated and discarded and begin to look at those materials that can be recycled.

What materials should a hospital collect in a recycling program?

Rechargeable Batteries	Electronic Medical Equipment	CRT / LCD Monitors
Laser / Ink-Jet Cartridges	Metals	Cell Phones / PDA's
Computers / Servers	Plastics	Printers / Fax Machines / Copiers
Laptops	Fluorescent Lamps	Baled Cardboard
Networking Equipment	Devices containing mercury	Office Paper

What type of collection containers or other storage containers are needed to collect recyclable materials for a hospital recycling program?

In most cases, recycling at hospitals occur behind the scene due to space constraints in many areas of the hospital. It is very critical that in the disposal area containers are established to collect separately metals, plastics, electronics, and office paper from the remaining garbage. Corrugated boxes, which often represent 40 to 50% of the waste stream of a hospital should be baled on-site or placed in a dedicated compactor for recycling. The recycling of corrugated containers is the key element of recycling in a hospital and can play a critical role in the reduction of solid waste disposal costs. This should be the first material to be recycled along with office paper.

Containers should also be established in the administrative office areas of the hospital for collecting office paper. Containers should also be established for collecting rechargeable batteries and laser and ink-jet printer cartridges. Used fluorescent lamps should be stored in the boxes in which the new lamps came and then collected for disposal/recycling of this hazardous material.

Green Monster e-Cycling strives to give back to the community. Our e-cycling program for hospitals includes a donation on our part, which we will "give back" a portion of our collected recycling fees to a charity or other non-profit organization of the hospital's choice.
